

Agenda:

- 1) What is a monolith.
- 2) Advantages & Disadvantages of Monolith.
- 3) What is a Microservice.
- 4) Advantages & Disadvantages of a Microservice.
- 5) Communication b/w Microservices.
- 6) When to use Monolith vs Microservice.

_____ * _____

Sachin. Shipkart.com

2008. ←

⇒ Ecommerce.

→ Authentication.
→ Inventory
→ UserService

→ Payment
→ Logistics
→ Notification.

⇒ frameworks.

⇒ PHP : Magento.

ROR : Spree.

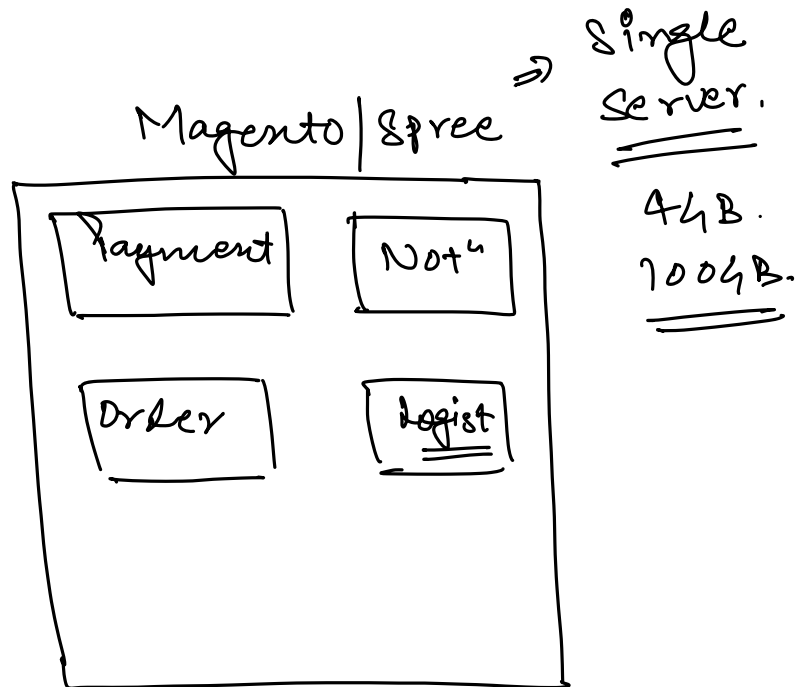

==

⇒

2008.

10-20 orders / Day

⇒ Domain.

⇒ 2010.

↳ 2000 orders/Day.

2000

⇒ 16GB RAM.

⇒ 2013.

20000 orders/Day.

⇒ 20-30. Engineers.

⇒ 64 RAM.

2015.

⇒ 200,000 / Day.

3 servers.

2015

~x

~x

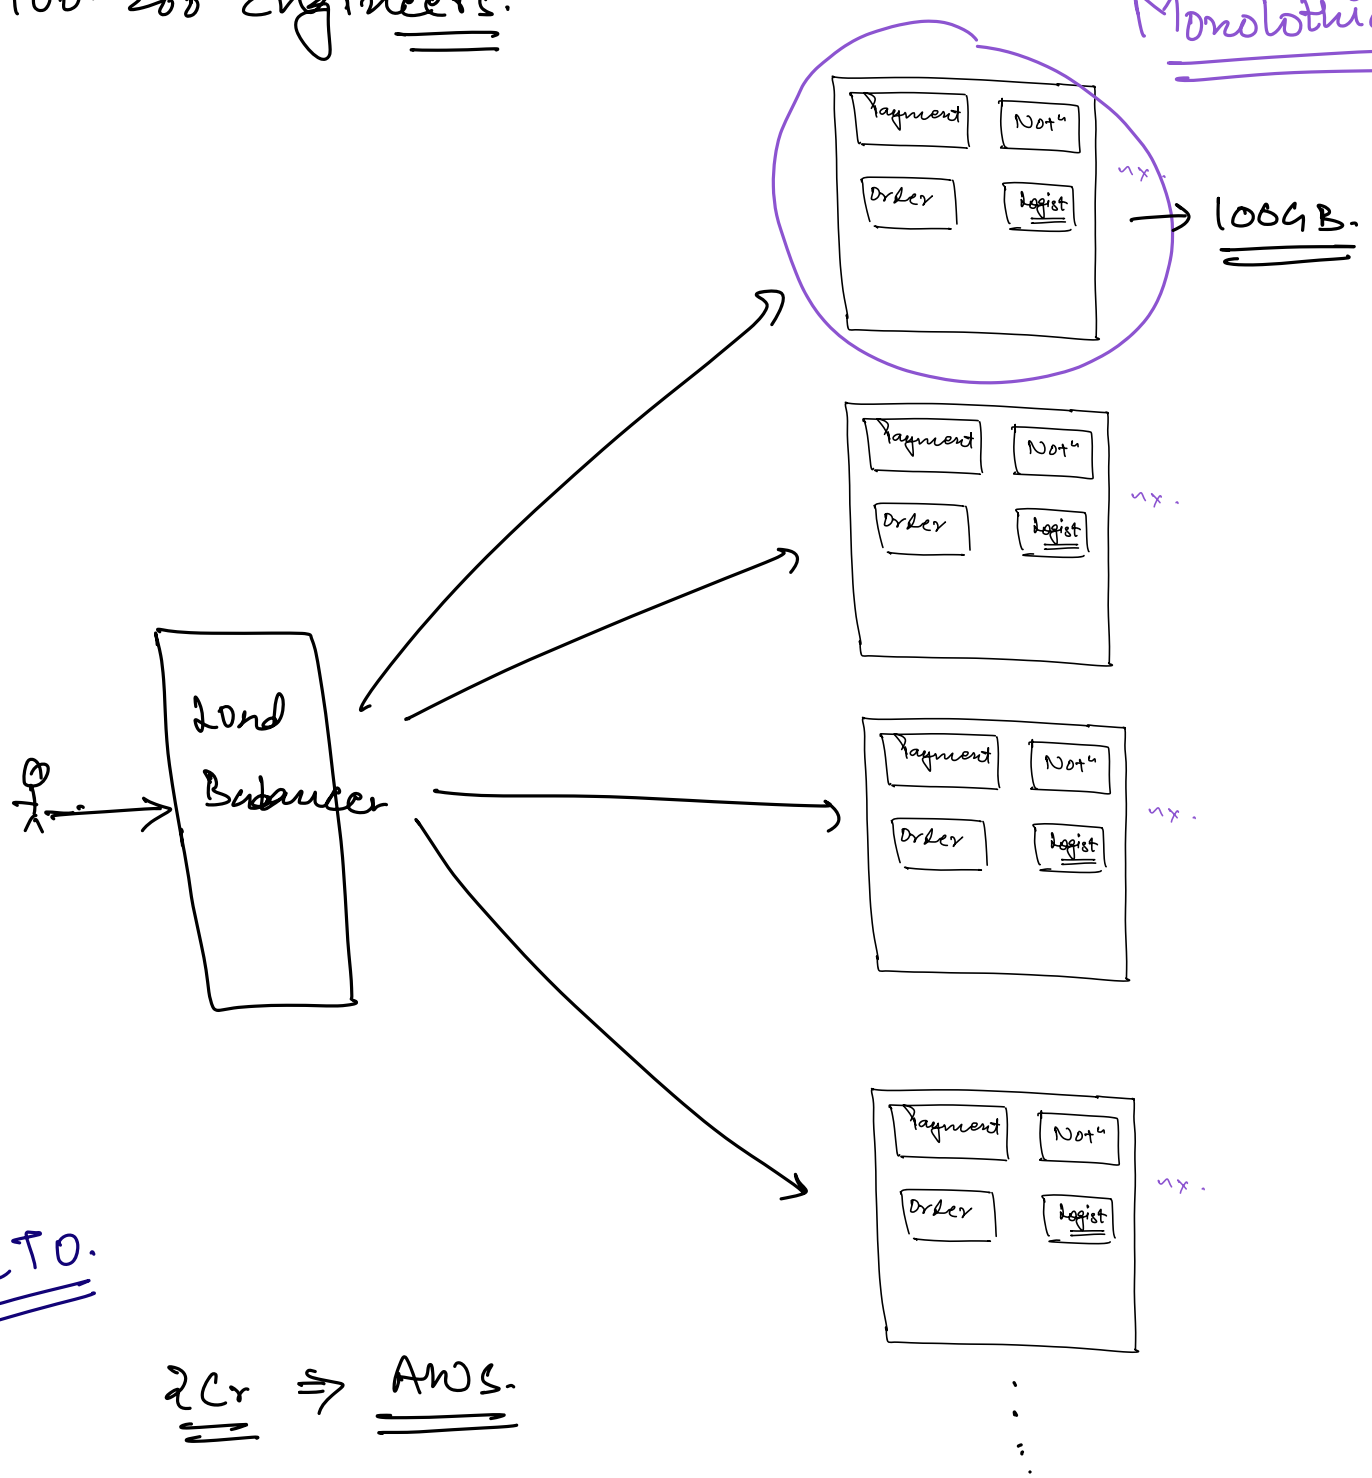

~x.

2017. 500,000 orders / Day.

~ 100-200 Engineers.

Monolithic.

CTO.

2Cr \Rightarrow AWS.

Vertical Scaling

⇒ We increased the capacity of same m/c.

⇒ Can't be done infinitely

Horizontal Scaling

⇒ Add more servers to our platform.

⇒ Can be done infinitely

⇒ We aren't utilising the resources efficiently.

Payment Service

AuthService

OrderService.

SearchService

Payment Service \Rightarrow Low Scale
 \Rightarrow Moderate CPU.

Search Service \Rightarrow High Scale
 \Rightarrow High CPU. } 64 Cores -
128 GB RAM.

Authentication. \Rightarrow High Scale
Less CPU. } 2 Cores
16 GB RAM.

\Rightarrow Selective Scaling.

Advantages & Disadvantages of Monolith.

Advantages:

- 1) Single Deployment.
- 2) E2E testing is easy.
- 3) Easy to debug
- 4) Single team.

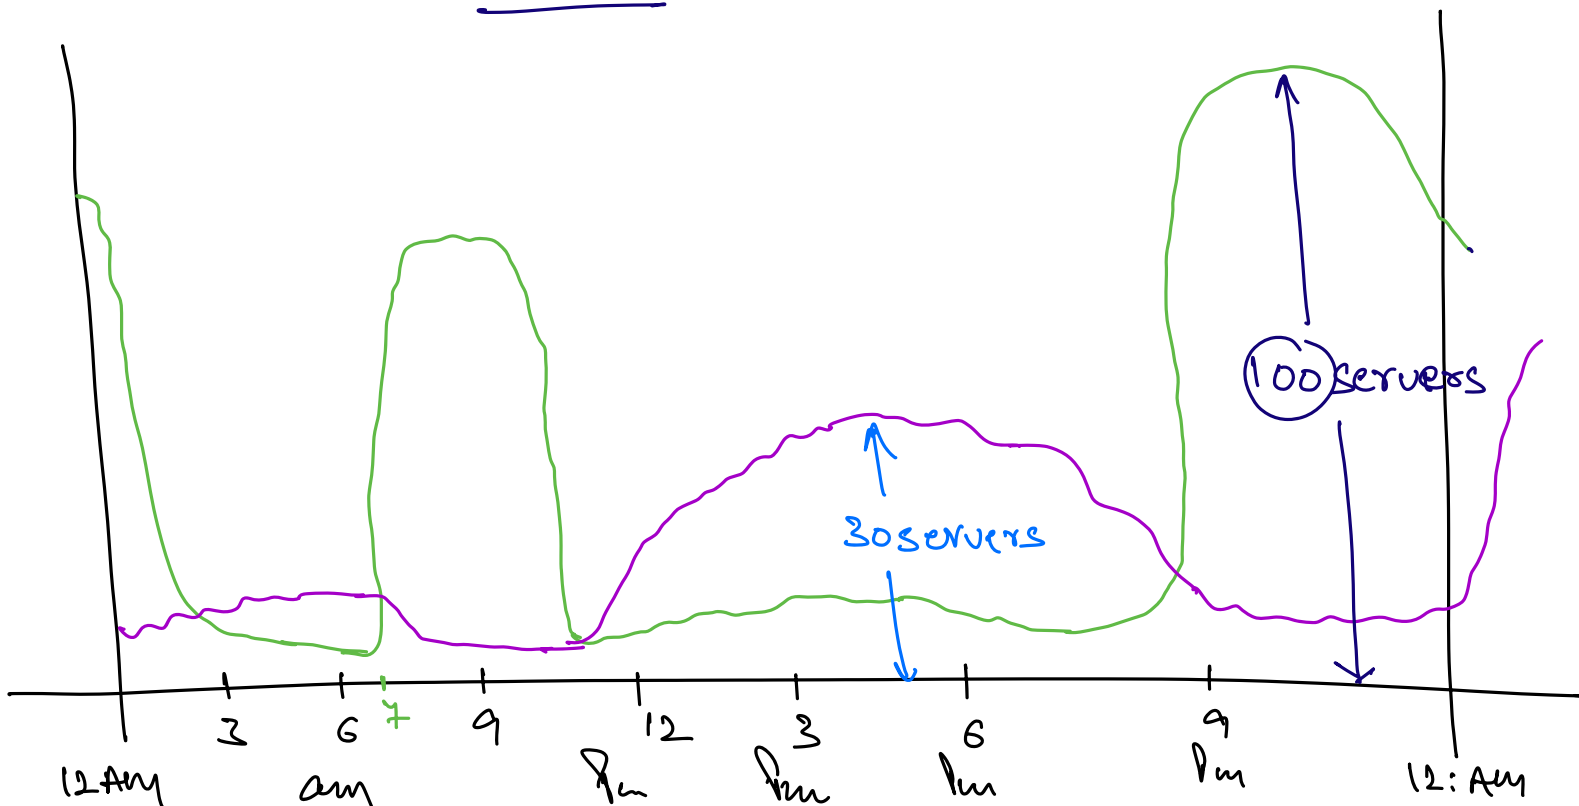

Dis Advantages:

- ⇒ A small issue can make the entire system down.
- ⇒ Tight coupling
- ⇒ No tech stack feasibility
- ⇒ High Deployment time.

SCALED.

- Video Streaming Service ~
- Assignment Service ~
- Auth Service

9 PM
7 AM.

MICROSERVICES.

⇒ Instead of having only one appⁿ, split our application into individual components.

Each component ⇒ Microservice

⇒ One service might need to communicate with other services in order to get the work done.

OrderService {

onOrderPlaced() {

Notifⁿ Service

Payment Service

Logistic ==

Advantages & DisAdvantages of Microservices.

Advantages

- 1) Tech stack flexibility.
- 2) faster Deployments.
- 3) Selective Scaling
- 4) Easy onboarding of new Engineers.

DisAdvantages

- 1) Lot of teams.
- 2) High latency because of n/w calls.
- 3) E2E testing.

⇒ Communication b/w Microservices.

- 1) HTTP
- 2) gRPC + Protobufs
- 3) Event Driven Systems.

⇒ HTTP.
↓
N/w

JSON ⇒ key value.

```
{  
  "id": _____  
  "name": _____  
  "desc": _____  
}
```

}

⇒ Easily readable

Serialization

Marshalling

⇒ Time consuming

2) gRPC + Protobufs.

Data format developed to make N/w
Call faster.

⇒ language agnostic.

⇒ Binary.

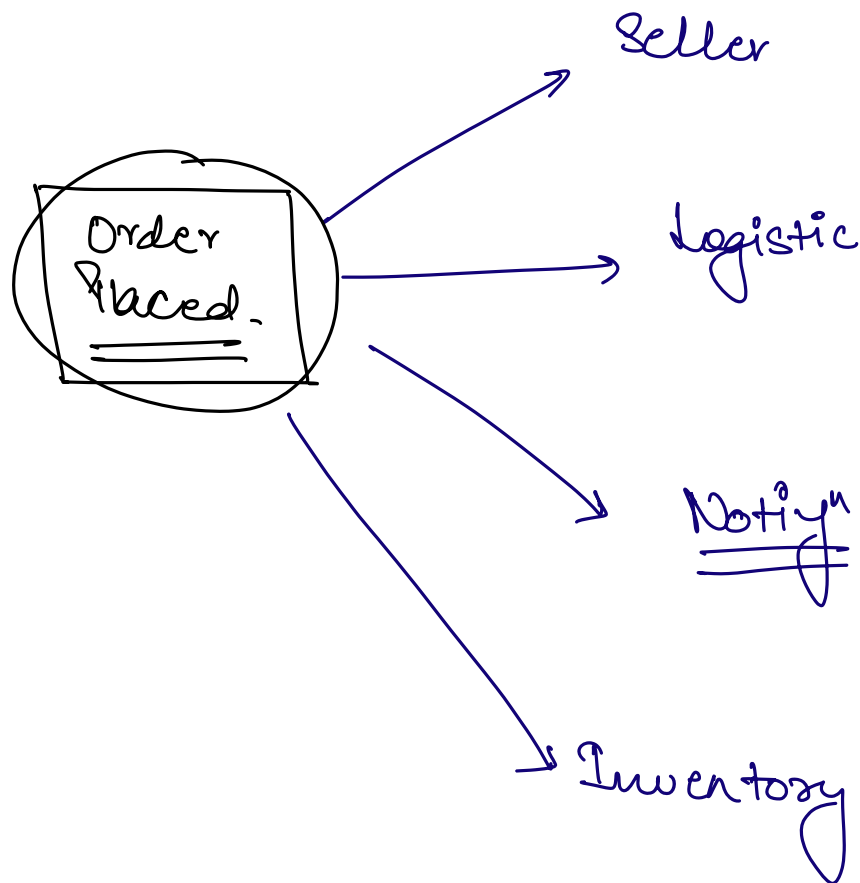

DeSerialization

UnMarshalling

⇒ Communication via Protobufs is faster as
No marshalling & unmarshalling is required.

③ Event Driven Systems.

⇒ Asynchronous. (Parallel).

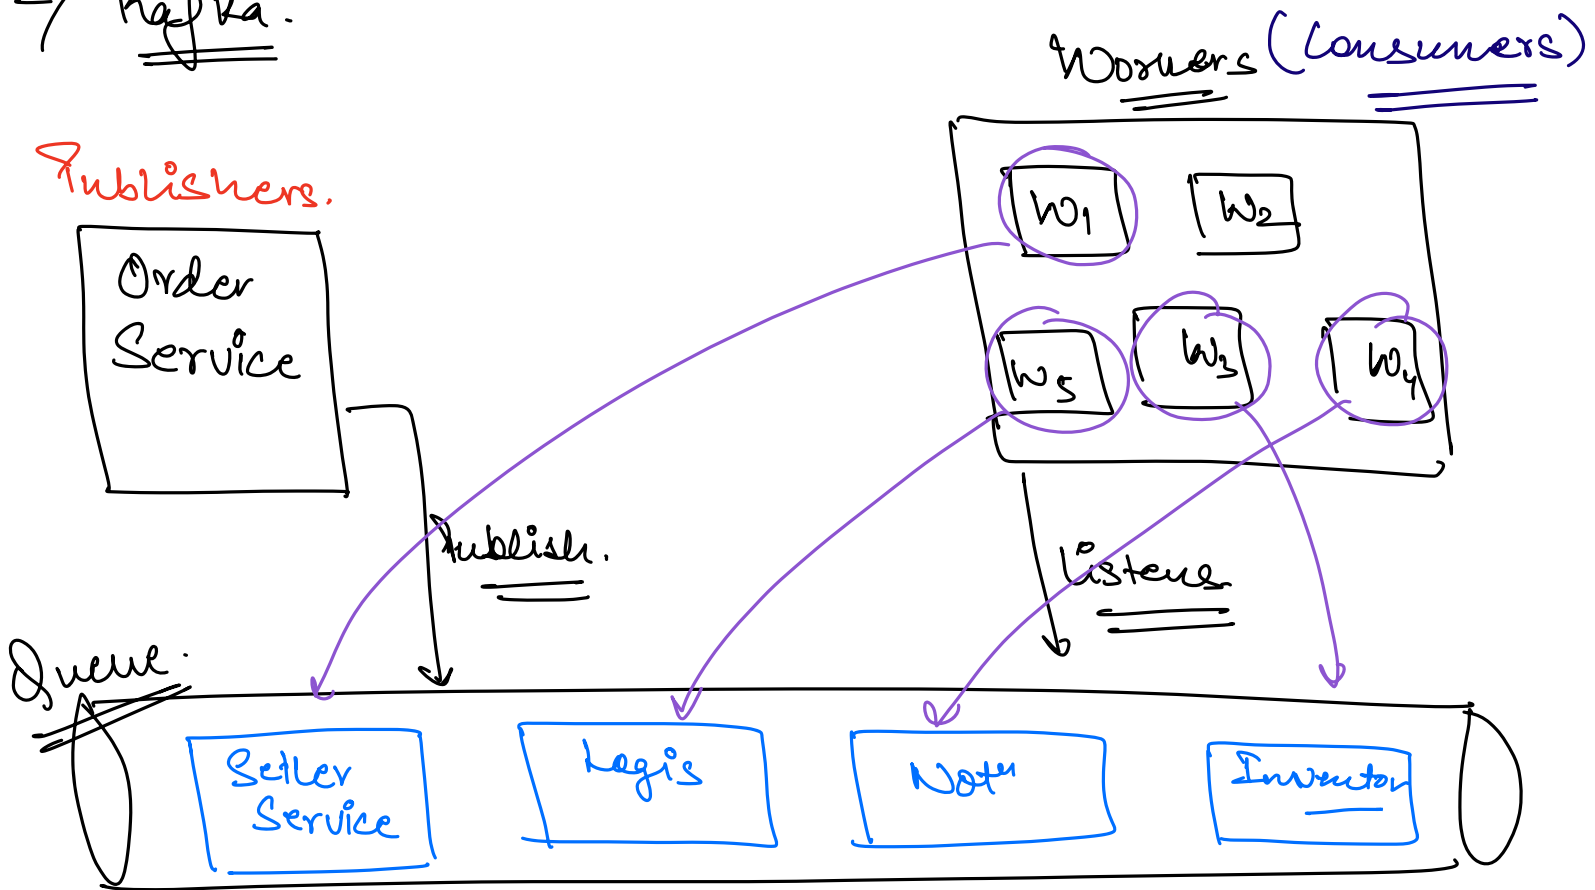

⇒ All these services can be called asynchronously.

⇒ Message Queues.

Kafka
Rabbit MQ
=====
}

⇒ Kafka.

⇒ PubSub Model.
